

concealing a front end of said knob body upon insertion of said elongated member into said axial bore, said knob body including magnetic means for maintaining said elongated member within said axial bore.

2. (Previously Cancelled).

3. (Previously Cancelled).

4. (Previously Presented) The hardware member as defined in claim 1 wherein said elongated member has a non-circular cross-sectional configuration conforming to the configuration of said axial bore to prevent rotation of said fascia member relative to said knob body.

5. (Currently Amended) The hardware member as defined in claim 1 wherein said magnetic means for maintaining includes a magnetic member disposed within said knob body for magnetically ~~attaching~~ retaining said fascia member.

6. (Previously Cancelled).

7. (Previously Cancelled).

8. (Previously Cancelled).

9. (Currently Amended) A hardware member adapted to be mounted to a panel of a furniture piece, said hardware member comprising:

a knob body adapted to be mounted to the furniture piece, said knob body having a seat and an axial bore in

communication with said seat, said seat removably receiving an interchangeable fascia member, said fascia member including an elongated member removably received within said axial bore upon insertion of said fascia member within said seat, said axial bore of said knob body including a magnetic member for magnetically attracting said elongated member to maintain said fascia member within said seat of said knob body.

10. (Cancelled)

11. (Previously Cancelled).

12. (Currently Amended) The hardware member as defined in claim ~~10~~ 9 wherein said elongated member has a non-circular cross-sectional configuration conforming to the configuration of said axial bore to prevent rotation of said fascia member relative to said knob body.

13. (Cancelled).

14. (Currently Amended) A hardware member adapted to be mounted to a panel of a furniture piece, said hardware member comprising:

a knob body adapted to be mounted to the furniture piece, said knob body having a seat formed in the front end of said knob body and an axial bore in communication with said seat; and
